Additional Advantages of the Retrofit Kit Are:

1) It allows the operator to start unloading from inside the vehicle.
2) The kit requires no drilling or welding during installation.
3) Due to the low power consumption, the battery can be cycled over 30 times between charging.
4) The whole kit costs less than $650 to build.
5) The kit features both wireless control and onboard controls.

The designed retrofit kit successfully eliminated the major limitations of the original trailer. It also is considerably faster, under budget, and doesn’t require drilling or welding for installation. It has also been called "WAY COOL" by our customer and sponsor Advanced 4 Wheel Drive.
